# Geolocation - How to configure a paragraph?

After having configured the Excel file and the taxonomies for Geolocation in Drupal, you will work on the front page – the one that will be displayed on the website.
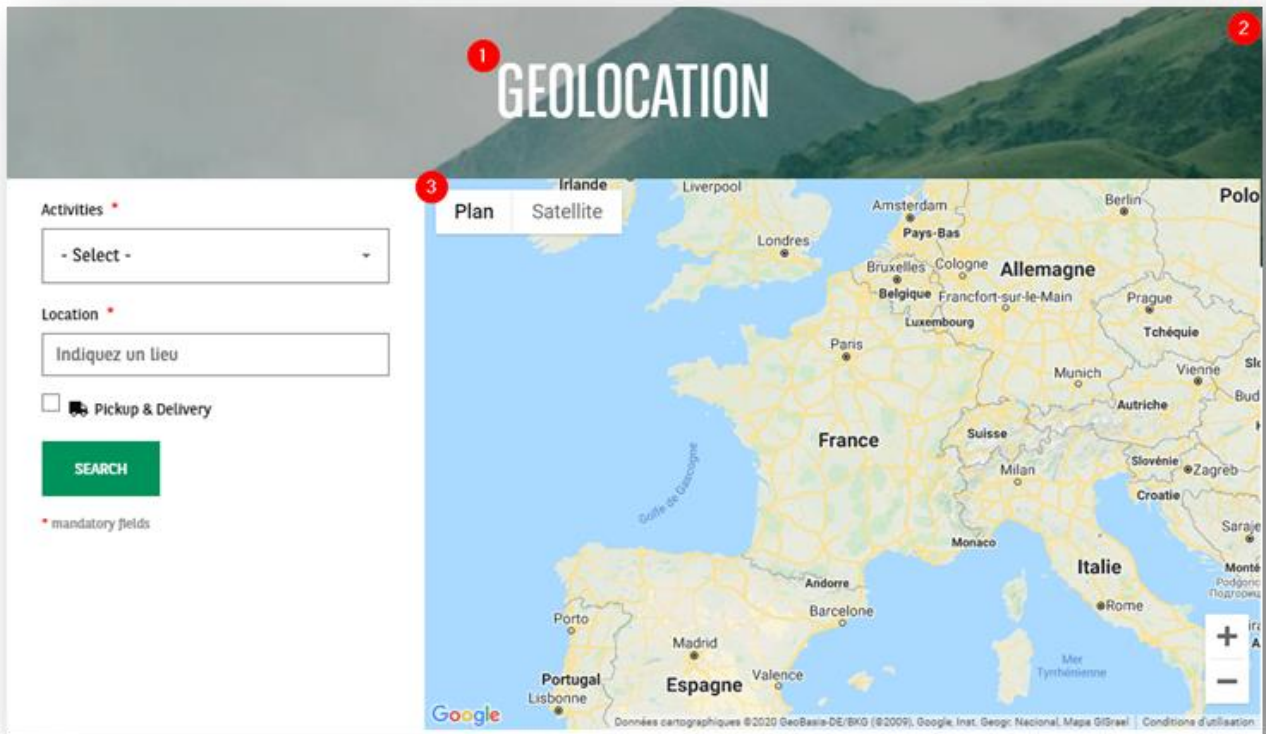

Start by creating a new page on your website or microsite (please refer to *Arval Website Factory 1 - Login & Content for the Creation of a page / How to create a page*)

Click on **Add paragraph** and search the **Geolocation** paragraph. Then, simply **add** it.

Then, you have to set up each item as explained below

Number	Title	Description
1	Paragraph title	The name of the paragraph
2	Header image	Choose an image (please refer to *Arval Website Factory 1 - Login & Content for Media management / How to manage media*)
3	Map	Here you can modify the map. Refer to the second table below for more details

Number	Title	Description
1	Country	Select your country
2	Zoom	The zoom definition once the search is complete – it can be from 0 to 20 depending on your country size
3	Distance	The research area (in meters) from the searched location – it depends on your country distances
4	Initial Zoom	This is the default zoom, when you arrive on the page and you see the entire country map – it also depends on your country

Arval Service Lease - Société Anonyme au capital de 66 412 800 € - 352 256 424 R.C.S - Paris
Siège social : 1, boulevard Haussmann - 75009 PARIS - N° TVA Intracommunautaire: FR 68 352 256 424

2

This is the final step for the configuration of your Geolocation page!
